DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because:

On line 1 of the abstract, "The invention concerns" should be deleted.

At the end of the abstract, "Figure 2." should be deleted.

Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claims 4-8, 9/3-9/8,10/3-10/8, 11/3-11/8, and 12/3-12/8 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1,2, 3/1, 3/2, 10/1, 10/2, 11/1, 11/2, 12/1, and12/2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steel (4,317,646) over Bobo (5,088,888).

Steel discloses a turbomachine (Figs. 1-3) comprising a casing 14a and 14b, a rotor, a cooled ring 18 situated between the casing and the rotor, the ring comprising a main cooling

Application/Control Number: 10/790,116

Art Unit: 3745

cavity (between plates 40 and 26a; Fig. 3) and being attached to the turbine casing by means of fastening devices 17 (Fig. 3) wherein the fastening devices comprise a clamping screw positioned generally radially and pinning the ring segment against the casing and the clamping screw is crossed through by a cooling airway that communicates with the main cooling cavity of the ring (Fig. 3);

wherein the clamping screw is crossed longitudinally by a single cooling airway (Fig. 3); wherein the fastening devices comprise a spacer (Fig. 3, next to the bore 34) mounted on the casing and through which the clamping screw passes; and

wherein the ring also comprises a secondary cooling cavity (Fig. 3, below plate 26a)separated from the main cooling cavity by a panel, the main and secondary cavities being radially superimposed.

However, Steel does not disclose the cooled ring comprises a plurality of ring segments as claimed.

Bobo teaches a turbine (Figs. 1, 2) having a plurality of cooled ring segments 41 formed by shroud hanger segments 28 and shroud segments 26 (Fig. 1) wherein the ring segments 41 are connected to each other by seal strips 54 (Fig. 2).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made, to make turbomachine of Steel with the cooled ring comprises a plurality of ring segments and connecting the ring segments with seal strips for the ease of assembling the ring inside the turbine casing and to prevent leakage between the rings as commonly done in the art.

5. Claims 9/1 and 9/2 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 1 patent.

Gabriel et al. (3,864,056) is cited to show a cooled turbine shroud.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Ninh Nguyen whose telephone number is (571) 272-4823. The examiner can be normally reached on Monday-Friday from 7:30 A.M. to 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look, can be reached at (571) 272-4820. The fax number for this group is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications
